Email: yz3544@cornell.edu

RESEARCH INTERESTS

Pharmacoepidemiology; Clinical Drug Effectiveness Evaluation; Chronic Disease Modeling; AI for Chronic Disease Prevention

EDUCATION

Cornell University **Ithaca, USA**
Master of Public Health *Sep 2025 - May 2027 (Expected)*

- **GPA:** 3.4/4.3 (Present)
- **Key Courses:** Biostatistics for Health Sciences; Advanced Epidemiologic Methods; Social Epidemiology Principles Influencing Health; Infectious Disease and Health; Pandemic Prevention Preparation Response; Vaccine Preventable Diseases; Data Analysis with R; Public Health Ethics

Zhejiang Chinese Medical University **Hangzhou, China**
Bachelor of Medicine in Preventive Medicine *Sep 2020 - Jun 2025*

- **GPA:** 2.88/5.0
- **Key Courses:** Epidemiology; Health Statistics; Hygiene Toxicology; Nutrition and Food Hygiene; Sanitary Chemistry; Social Medicine; Behavioral Medicine; Comprehensive Preventive Medicine; Biochemistry; Systematic Anatomy; Physiology; Medical Microbiology; Pathology

RESEARCH EXPERIENCE

Data Governance and Performance Evaluation of Multiple Myeloma Prediction Models
Core Member | Peking University-Yinzhou Regional Joint Institute for Advanced Medical Intelligence and Digital Health *Jul 2026 - Present*

- **Summary:** This study systematically evaluated existing prediction models for multiple myeloma using the CHARMS checklist and the PROBAST tool to assess methodological quality and risk of bias. A comprehensive data governance framework was also developed to extract diagnostic records from the Yinzhou disease surveillance database, map them to ICD-10 standards, and create reproducible matching methods for large-scale longitudinal data spanning over 20 years.
- **Contributions:** Literature search; Study characteristic extraction; Risk-of-bias assessment (PROBAST); Systematic review preparation

Multilevel Determinants of Ischemic Stroke Risk Associated with Combined Oral Contraceptive Use Among U.S. Reproductive-Aged Women: A Social Ecological Model Analysis
Individual Course Project | Social Epidemiology *Jan 2026 - May 2026*

- **Summary:** This study adopted the Social Ecological Model as its analytical framework. It comprehensively analyzed individual, biological, environmental, policy, and social factors affecting ischemic stroke risk associated with combined oral contraceptive use among U.S. reproductive-aged women. A multi-level health determinant model was then constructed to guide targeted public health interventions at different societal levels.

Smoking and New-Onset Atrial Fibrillation in Older Adults: A Retrospective Cohort Study Using the New York State SPARCS Database
Individual Course Project | Epidemiology in Practice *Sep 2025 - Dec 2025*

- **Summary:** This study designed a population-based retrospective cohort analysis using the New York State SPARCS database. It examined the association between smoking and new-onset atrial fibrillation among adults aged 60 years or older in New York City. Clearly defined inclusion and exclusion criteria, exposure and outcome definitions, statistical analysis plans, and bias control strategies were established.

Oral Anticoagulation in Atrial Fibrillation Patients (CHA_2DS_2-VASc = 1)

Bachelor's Project | The First Affiliated Hospital of Ningbo University *Oct 2024 - Apr 2025*

- **Summary:** Atrial fibrillation often coexists with stroke, and CHA_2DS_2-VASc scores are routinely used to guide anticoagulation therapy. However, evidence was scarce for patients with a non-sex score of 1. This study specifically investigated whether oral anticoagulants improved prognosis in this intermediate-risk group, thereby addressing a key gap in clinical guidelines and supporting more informed treatment decisions.

The Clinical Potential Role of C-Reactive Protein in Diseases

Core Member | Undergraduate Research Training Program *Jul 2022 - Jan 2023*

- **Summary:** C-reactive protein is a common inflammatory marker, but prior meta-analyses were fragmented across different disease areas. This umbrella meta-analysis systematically synthesized existing evidence, evaluated heterogeneity and publication bias, and assessed the credibility of CRP-outcome associations across multiple health conditions, thus providing stronger and more robust evidence for clinical application.
- **Contributions:** Literature quality assessment; Data verification; Result discussion

INTERNSHIP EXPERIENCE

Ultimate Re-entry Opportunity **Ithaca, USA**

Program Intern *Apr 2026 - Present*

- Coordinated project meetings to plan and implement a health education program tailored for incarcerated populations, aligning content with community health needs and organizational goals
- Developed pre- and post-intervention questionnaires to evaluate the program's impact on health knowledge and behavior change among participants
- Contributed to survey design, iterative revision cycles, and evaluation planning to support both program implementation and rigorous outcome assessment

Ningbo Center for Disease Control and Prevention **Ningbo, China**

Intern | Department of Infectious Diseases Prevention & Health Education *Jul 2024 - Nov 2024*

- Optimized the inclusion criteria for atrial fibrillation patients with a CHA_2DS_2-VASc score of 1 by collaborating with cardiology experts, conducted a baseline study to identify excluded patients (those with score ≥ 2), and refined the study protocol for oral anticoagulation necessity research
- Assisted in screening patients receiving oral anticoagulants by evaluating key confounding factors including poor compliance, financial burden, and the temporal gap between AF diagnosis and medication initiation, contributing to data quality assurance
- Independently declared 200 respiratory disease spot-check cases, mastered the disease reporting workflow and internal medical system, while also creating health education materials that reached 500 students and increased campus engagement by 11%

The First People's Hospital of Fuyang, Hangzhou **Hangzhou, China**

Intern | Department of Infectious Diseases & Hospital-Acquired Infection Control *Jul 2022 - Jan 2023*

- Documented over 150 patient medical records with 100% accuracy, recording symptoms, examination results, and treatment plans for infectious disease cases
- Monitored dentist chair water quality, bioclean operating rooms, and hand hygiene for infection control, and produced educational videos on bed unit terminal disinfection
- Performed clinical procedures including ECG monitoring, chest drainage bag changes, and patient assessment assistance, ensuring sterile technique throughout

LANGUAGES & SKILLS

Languages: Chinese (Native); English (IELTS 7.5)

Technical Skills: Programming Languages (R, Python, SQL); Statistical Software (SAS, SPSS, PASS); Office & Design Tools (Microsoft Word, Excel, PowerPoint, Adobe Photoshop)
